

	Scenario 1	Scenario 2	Scenario 3
Scenario Name	Shopping Cart	API Testing	Dashboard / Report Generation
Weak Prompt	Test the cart functionality	Write API test cases for user registration	Test the reports section
What I Feel is Missing	1. What cart it refers to? 2. What features to be considered? Like Registration, login, profile management, Add, Modify, Update, remove from cart features. 3. Not considered other features such as price comparison, discounts, bank offers, payment options. 4. Handling out of stock 5. Exchange Options 6. Return Policy 7. Maximum quantity that can be ordered 8. Order confirmation and delivery information 9. Send SMS, whatsapp and email notification for the registered mobile/email	1. Request payload fields (Mandatory/optional fields) 2. Error / Status Codes 3. No information about the application, domain, API specificationm, Business Rules. Authentication requirements 4. No role assigned 5. Output format	1. What report it is referring to? 2. What sort of verification to be performed? 3. What are the fields, filters, format of fields? 4. Report parameters such as report if and title 5. Role to access the report 6. How to access the report? Navigation 7. Security user cases like SQL Injection 8. Report format
Instruction	Act as a senior test engineer to write test script for a ecommerce mobile application	As a senior qa engineer, generate comprehensive API test cases covering positive, negative, boundary, security, and performance scenarios.	Act as a senior test engineer to write test script for validating Trial Balance Report for Banking application.

Context	[MANDATORY] User Registration, login, forget password, profile management, Add, Modify, Update, remove from cart, place order, cancel order. [MANDATORY] Price comparision of similar products [MANDATORY] Discounts on selected products [MANDATORY] Bank offers for credit card purchase [MANDATORY] Different payment options like Cards (Debit/Credit), UPI, COD, Netbanking [MANDATORY] Show proper error for out of stock items [MANDATORY] Show exchange option for selected brands [CRITICAL] Show Return Policy for each product based on the category [HIGHPRIORITY] Limit quantity to maximum 2 per user for selected items [HIGHPRIORITY] Show order confirmation once order is placed [HIGHPRIORITY] Show delivery information befre placing the order [HIGHPRIORITY] Send SMS, whatsapp and email notification for the registered mobile/email ID	The API is a POST endpoint for a digital banking platform. Users register using email, password, phone number, and date of birth. [MANDATORY] User Name [MANDATORY] Password [MANDATORY] Phone Number [MANDATORY] Date of Birth [CRITICAL] API Request Key validation using SHA-256 algorithm [MANDATORY] Validate the reponse payload for success / error message [MANDATORY] Validate the Response Code	[MANDATORY] PDF Format [MANDATORY] Has Title 'Trial Balance Report' [MANDATORY] Repoting Date [MANDATORY] Generated By [MANDATORY] Reporting Period (from and to date) [MANDATORY] Validate Header and Footer [MANDATORY] Validate key details such as GL Account Number, GL Account Name, Type, Opening Balance, movement of fund, Branch, other bank details, Credit/Debit Balance																								
Example	Similar to standard ecommerce platform such as flipkar or amazon	TC001 Valid Registration Submit valid user details HTTP 201 Created	<table border="1"> <thead> <tr> <th>GL Account</th> <th>Account Name</th> <th>Debit</th> <th>Credit</th> </tr> </thead> <tbody> <tr> <td>100100</td> <td>Cash at Central Bank</td> <td>50,000,000</td> <td></td> </tr> <tr> <td>120100</td> <td>Customer Loans</td> <td>500,000,000</td> <td></td> </tr> <tr> <td>200100</td> <td>Customer Deposits</td> <td></td> <td>480,000,000</td> </tr> <tr> <td>300100</td> <td>Share Capital</td> <td></td> <td>40,000,000</td> </tr> <tr> <td>400100</td> <td>Interest Income</td> <td></td> <td>20,000,000</td> </tr> </tbody> </table>	GL Account	Account Name	Debit	Credit	100100	Cash at Central Bank	50,000,000		120100	Customer Loans	500,000,000		200100	Customer Deposits		480,000,000	300100	Share Capital		40,000,000	400100	Interest Income		20,000,000
GL Account	Account Name	Debit	Credit																								
100100	Cash at Central Bank	50,000,000																									
120100	Customer Loans	500,000,000																									
200100	Customer Deposits		480,000,000																								
300100	Share Capital		40,000,000																								
400100	Interest Income		20,000,000																								

			500100 Interest Expense 8,000,000 **Total** **558,000,000** **558,000,000**
Persona	Act as a end customer and review whether it covers all the use cases that are applicable for a ecommerce application and provide a score	Act as API Automation Architect and review the test cases from coverage standpoint and provide a score	Act as a senior qa lead, validate the coverage of test cases amd provide a score on the test coverage
Output Format	Excel format with Test case ID, Feature, Test case type (positive/negative), Test Objective, Pre-requisities, Test Data, Test Steps, Expected Result information	Excel format with Test case ID, Feature, Test case type (positive/negative), Test Objective, Pre-requisities, Test Data, Test Steps, Expected Result information	Excel format with Test case ID, Feature, Test case type (positive/negative), Test Objective, Pre-requisities, Test Data, Test Steps, Expected Result information
Tone	To be more Professional	To be more Professional	To be more Professional

Observations	This helped to uncover more number of missing use cases and improvised test coverage to 95 to 98%	Gave test cases with >95% test coverage across different areas such as Functional, Boundary cases, Error Handling, Input Validation and Performance.	Improvised test case coverage drastically and included test cases that we haven't thought about.
